Professional Experience

Atlassian – Software Development Engineer 2 July 2025 – Present
Reliability Process Group

- Led the upgrade of a customer-facing service from Tier 3 to Tier 2 SLA, improving reliability and support responsiveness for end users.
- Designed and implemented React UI components to display incident action items with real-time deadline timers, enhancing user visibility into critical service events.

Amazon – Software Development Engineer August 2022 – July 2025
Transportation Financial Systems Team

- Designed and led the development of an automated cost allocation platform for Ship with Amazon sort centers and delivery stations, increasing shipping cost coverage by $6M per month. Worked with a team of 3 engineers in end-to-end delivery.
- Architected and led a volume-based allocation system for Amazon packaging and shipping supply costs, enabling $4B annual cost allocation coverage. Directed a team of 2 engineers, ensuring timely delivery and robust design.
- Spearheaded the migration of Amazon's production stack to AWS Step Functions (State Machine) from AWS Data Pipeline, reducing operational costs by 45% while improving fault tolerance and reliability at scale.
- Designed and implemented flexible fleet EMR provisioning, eliminating instance capacity exceed issues and reducing monthly infrastructure costs by $55K.
- Drove resolution of multiple recurring business-critical production issues, reducing SLA violations and increasing shipment coverage by 9%, directly improving customer trust and delivery experience.
- Defined and delivered scalable monitoring and observability solutions, including EMR metrics and alarms, along with QuickSight dashboards, providing leadership teams visibility into performance KPIs.
- Developed and standardized a redrive and backfill job execution framework for EMR-based services, reducing recovery effort and improving execution efficiency across production workloads.
- Played an active leadership role in peak readiness initiatives, achieving 98%+ readiness ahead of ATS deadlines and leading on-call operations to remediate multiple high-priority long-standing issues.
- Mentored and coached an intern on an EMR Spark profiling initiative, ensuring solution quality and cross-service applicability, while enhancing their technical depth and ownership.
- Provided technical leadership in infrastructure-as-code automation, designing orchestrations using Apache Airflow and AWS CDK, boosting deployment velocity and improving team productivity.

Publicis Sapient – Software Development Engineer June 2021 – July 2022
Keurig Dr Pepper Team

- Implemented product card, cashback, and swap pages with rich interactive experiences used across multiple client sites.
- Built a cross-platform mobile app using React Native, React Native Web, and React.js, achieving 80% component reusability across web and mobile platforms.
- Developed microservices for a full-stack supermarket application with role-based access, inventory management, and order processing. Utilized Spring Boot, Spring Security, and React.js.
- Added French localization and accessibility features to client sites, enhancing user experience for a broader audience.

Projects

MovieLens 100K Analysis ETL Nov 2024 – Dec 2024
Spark, Airflow, Docker, Postgres, Adminer

- Developed an ETL pipeline to analyze the MovieLens 100K dataset, focusing on user ratings and trends. Utilized Python for data cleaning, transformation, and persisting, providing valuable insights into movie preferences.

SMLib - Library Book Management Application January 2020 – February 2020
Python, Tkinter, SQLite3

- Created a GUI application for managing library books, including adding, updating, searching, and deleting records. Developed using Python, Tkinter, and SQLite3 with a user-friendly interface.

Education

National Institute of Technology, Durgapur • India July 2017 – May 2021
Bachelor of Technology • *Information Technology* • CGPA: 8.23/10

Technical Skills

- **Programming Languages**: Java, Python, C++, TypeScript, Scala
- **Frameworks and Technologies**: AWS (Lambda, EMR, S3, SQS, SNS, Step Functions, Redshift, Jupyter, Glue, Athena, CDK), Apache Airflow, React.js, React Native, Redux, Spring Boot, Spring Security, Jenkins, Apache Spark, Redis, MongoDB, PostgreSQL, Apache Hudi, Git, Amazon QuickSight

- **Concepts**: Data Structures and Algorithms, Distributed Systems, Object-Oriented Design, DBMS, Operating Systems

Achievements and Activities

- **Amazon Awards**: Received the Transportation Financial Systems Team Spot Award thrice for excellence.
- **Code Gladiator 2022 Finalist**: Ranked 167 out of 416,000 participants.
- **Chegg Managed Network Expert**: Provided solutions and guidance in computer science subjects.
- **Devcon 2025, Seattle, USA**: Selected among top 130 projects to present CradleOrchestrationProxy, an engineering excellence initiative, at Amazon Devcon 2025.
